---

## Monte Winslow

Associate Professor of Genetics and of Pathology

### Bio

---

#### ACADEMIC APPOINTMENTS

- Associate Professor, Genetics
- Associate Professor, Pathology
- Member, Bio-X
- Member, Stanford Cancer Institute
- Member, Wu Tsai Neurosciences Institute

#### HONORS AND AWARDS

- Stanford University Graduate Fellowship, Stanford University (2000-2004)
- Pre-Doctoral Fellowship, Howard Hughes Medical Institute (2001-2006)
- Hugh McDevitt Prize in Immunology, Stanford University (2006)
- Damon Runyon Cancer Research Foundation, Fellowship (2006-2009)
- Genentech Postdoctoral Fellowship, Massachusetts Institute of Technology (2009-2010)
- Scholar Award, Baxter Foundation (2011)
- Scholar Award, The V Foundation for Cancer Research (2012-2013)

#### PROFESSIONAL EDUCATION

- Ph.D., Stanford University , Immunology (2006)
- B.S., University of Victoria, Canada , Biochemistry and Microbiology (2000)

#### LINKS

- Winslow Lab Website: <http://winslowlab.stanford.edu/>

### Research & Scholarship

---

#### CURRENT RESEARCH AND SCHOLARLY INTERESTS

Metastasis is a major clinical challenge driven by poorly understood cell state alterations. The goal of our lab is to use unbiased genomic methods and in vivo models to better understanding the molecular and cellular changes that underlie tumor progression and each step of the metastatic cascade. We use genetically-engineered mouse models of metastatic cancer in which the resulting tumors recapitulate the genetic alterations and histological progression of the human disease.

In these models, tumors develop within their appropriate microenvironment and undergo changes in their gene expression programs that endow them with the ability to invade blood and lymphatic vessels, survive in circulation, enter various distant organs, and ultimately grow into new tumor lesions. Given the dearth of human tissue samples from metastatic disease, especially from primary tumors and metastases from the same patient prior to therapy, these models represent a unique opportunity to understand the molecular biography of the most prevalent tumor types.

By generating activating and inactivating germline and inducible alleles, and modulating gene expression using lentiviral vectors, these models allow us to characterize the function of candidate genes and pathways during tumor progression and metastasis in vivo. By incorporating increasingly quantitative methods and powerful in vivo methods, our work is focused on uncovering general rules that govern tumor progression and metastatic spread and discovering novel therapeutic targets across the continuum of cancer progression including the lethal metastatic stage.

## Teaching

---

### COURSES

#### 2018-19

- Advanced Genetics: GENE 205 (Win)
- Biology and Applications of CRISPR/Cas9: Genome Editing and Epigenome Modifications: BIOS 268, GENE 268 (Spr)
- Cellular and Clinical Aspects of Cancer: CBIO 242 (Spr)

#### 2017-18

- Advanced Genetics: GENE 205 (Win)
- Biology and Applications of CRISPR/Cas9: Genome Editing and Epigenome Modifications: BIOS 268 (Spr)
- Cellular and Clinical Aspects of Cancer: CBIO 242 (Spr)

#### 2016-17

- Advanced Genetics: GENE 205 (Win)

#### 2015-16

- Advanced Genetics: GENE 205 (Win)

### STANFORD ADVISEES

#### Doctoral Dissertation Reader (AC)

Ian Linde, Maggie Martins

#### Postdoctoral Faculty Sponsor

Hongchen Cai, Wen-Yang (Ann) Lin, Rui Tang, Maryam Yousefi

#### Doctoral Dissertation Advisor (AC)

Nicholas Hughes

### GRADUATE AND FELLOWSHIP PROGRAM AFFILIATIONS

- Cancer Biology (Phd Program)
- Genetics (Phd Program)

## Publications

---

### PUBLICATIONS

- **Towards quantitative and multiplexed in vivo functional cancer genomics.** *Nature reviews. Genetics*

Winters, I. P., Murray, C. W., Winslow, M. M.  
2018

- **Tumor Suppressor Activity of Selenbp1, a Direct Nkx2-1 Target, in Lung Adenocarcinoma.** *Molecular cancer research : MCR*
