Bio

BIO

I am a first year MBA Candidate and E-IPER student at Stanford passionate about leveraging technology to solve social problems. Particularly interested in helping to move forward the transition to clean energies in Latin America.

Before coming to Stanford I worked in management consulting for BCG, where I helped clients in the Industrial Goods space to improve their operations, supported Financial Institutions to re-define their strategies and helped high tech innovators to create a scalable business model and look for funding. Prior to BCG, I was a high school teacher of Leadership and Social Engagement and I worked as an intern at Simon de Ciro Foundation helping micro-entrepreneurs to grow their businesses.

I hold a degree in Industrial Engineering with a Diploma in Electrical Engineering and specialization in Astronomical Instrumentation. During my undergraduate studies, I co-managed and co-founded social projects for students.
