

Emily Spackman

Postdoctoral Scholar, Psychiatry

Bio

BIO

I am an early career researcher with a PhD from the University of Melbourne, Australia. I am currently working in a postdoctoral position at Stanford, where I am involved in several research projects focusing on measurement development, phenotypic characterisation, and advancing insights into the heterogeneity of autism. My primary research interest is to better understand heterogeneity in autism presentation as a stepping stone towards developing more individualised assessment and support.

STANFORD ADVISORS

- Antonio Hardan, Postdoctoral Faculty Sponsor
