

Keiko Waki

Visiting Associate Professor, Materials Science and Engineering

Bio

BIO

Keiko Waki, as an associate professor of Tokyo Institute of Technology (TIT) in Japan, has worked extensively with her group on controlling the defects of carbon nanotubes and nano materials for integrating new materials into emerging technologies in the field of fuel cells and solar cells. Now, she is working with Prof. Dauskardt's group in Stanford Materials Science and Engineering on the plasma-assisted film processing for various device technologies as a visiting associate professor.
