

Nur Arafah Dalmau

Postdoctoral Scholar, Oceans

Bio

BIO

I am currently a postdoc at UCLA and Stanford and an Honorary Fellow at The University of Queensland. I am a marine community ecologist and marine spatial planner. My research focuses on understanding the impacts of marine heatwaves on kelp forest ecosystems. I also research the role of marine protected areas and other effective area-based conservation measures for providing climate resilience and designing networks of climate-smart marine protected areas. I support conservation initiatives with NGOs, parks, and fishers, and teach decision tools such as Marxan. My heart remains in my beautiful Costa Brava, Spain (Catalonia), where I do my best to support conservation. I am a naive dreamer, and I know future generations will dive into healthy kelp forests and thriving marine ecosystems.
