#### BIO

I'm a Mechanical Engineering undergraduate student particularly interested in sustainability and inclusivity. My interest in engineering sparked in high school where I joined VEX robotics, took PLTW engineering courses, and volunteered at the school's maker space where I learned rapid prototyping involving Computer-Aided Design, 3D printing and laser cutting. I'm currently a structures engineer in Stanford's Flight Club for the Solar Airplane team. I look forward to expanding my technical skills during my time at Stanford through coursework, Flight Club, and personal projects.
