

Martijn Arns

Visiting Scholar, Psych/Major Laboratories and Clinical & Translational Neurosciences Incubator

Bio

BIO

I'm a biological-psychologist and entrepreneur with a background in applied neuroscience and brain stimulation. In 2001, I founded Research Institute Brainclinics as a private and independent research institute part of the non-profit Brainclinics Foundation where I'm still research director. The Brainclinics Foundation's primary mission is best summarized as: 'Applied Neuroscience: From the clinic, to the clinic' and focuses on interventional psychiatry and applied neuroscience where research outcomes should be easily translatable into clinical practice and clinically actionable. My expertise extends to the development and application of brain stimulation techniques, such as rTMS for depression and OCD, TMS induced Heart-Brain Coupling and EEG based precision psychiatry and stratified psychiatry. Currently, I'm associate professor at the University of Maastricht (Brain Stimulation and Cognition) and visiting scholar at Stanford University (Stanford Brain Stimulation Lab).
