

Fereshteh Jahanbani

Basic Life Res Scientist, Genetics

Bio

BIO

Dr. Jahanbani received her PharmD from Tehran University of Medical Sciences (TUMS) and PhD in pharmacology from Iran University of Medical Sciences (IUMS) and her postdoctoral degree from Case Western Reserve University (CWRU) and University of California, Santa Cruz (UCSC). She joined Stanford Center for Genomics and Personalized Medicine in June 2012. Her work is focused on better understanding the etiology of chronic complex conditions and multi-morbidity using multi-omics and precision health approaches. She has been leading ME/CFS related disorders multi-omics study combining the power of both family and population approaches and also cofounded "Research To The People at Stanford Program".
