

Antonello Paolino

Graduate Visiting Researcher Student, Mechanical Engineering

Bio

BIO

I am a Visiting Student Researcher at Stanford Mechanical Engineering, working on the PSAAP project under Prof. Gianluca Iaccarino's supervision.

I received my BSc (2018) and MSc (2021) in Aerospace Engineering from the University of Naples Federico II.

I am currently a PhD Student at the Italian Institute of Technology (IIT) in Genoa and the University of Naples Federico II under the supervision of Dr. Daniele Pucci and Prof. Renato Tognaccini. My PhD research focuses on the modeling and control of the aerodynamic forces acting on the jet-powered humanoid robot iRonCub using both classical and machine learning approaches.
