

Li Wang

Assistant Professor of Biology

Bio

BIO

Li is a developmental neurobiologist with interdisciplinary training in genomics, proteomics, and neuroscience. His research seeks to understand how cellular and synaptic diversity arises during human brain development and evolution, and how these same mechanisms may be hijacked in diseases such as brain cancer.

Li received his B.S. from Fudan University in China, where he studied synaptic plasticity during critical periods in the visual cortex. During his Ph.D. with Dr. Huda Zoghbi at Baylor College of Medicine, Li explored the molecular basis of neurodevelopmental disorders, uncovering how mutations in key proteins like SHANK3 and MeCP2 disrupt neural function. His postdoctoral work with Dr. Arnold Kriegstein at UCSF expanded this focus to human brain development at single-cell resolution. He generated multi-omic atlases and cross-species proteomic maps that revealed novel progenitor cell types and human-specific synapse maturation programs, with implications for cognition and brain cancer. Li directs the Human Brain Development Lab (<https://www.liwanglab.org>) at Stanford University, where he continues to investigate human brain development with a focus on stem cell lineages and synaptic diversity.

Li has received many awards, including the NIH K99/R00 Pathway to Independence Award, the Trainee Professional Development Award from the Society for Neuroscience, the Keystone Symposia Scholarship, the Dennis Weatherstone Predoctoral Fellowship from Autism Speaks, and the Dean's Award for Excellence from Baylor College of Medicine.

ACADEMIC APPOINTMENTS

- Assistant Professor, Biology
- Member, Bio-X
- Member, Institute for Stem Cell Biology and Regenerative Medicine
- Member, Maternal & Child Health Research Institute (MCHRI)
- Member, Wu Tsai Neurosciences Institute

HONORS AND AWARDS

- Trainee Professional Development Award, Society for Neuroscience (2023)
- K99/R00 Pathway to Independence Award, NIMH (2023)
- 1st Place Platform Speaker Award, The 29th Annual Graduate Student Symposium, Baylor College of Medicine (2017)
- Travel Scholarship, Keystone Symposium on Synapses and Circuits: Formation, Function and Dysfunction (2017)

- 1st Place in Oral Presentation, Department of Molecular and Human Genetics Annual Retreat, Baylor College of Medicine (2016)
- Best Poster in Basic Science Award, Pediatric Research & Fellows' Symposium, Baylor College of Medicine and Texas Children's Hospital (2016)
- Dennis Weatherstone Predoctoral Fellowship, Autism Speaks (2014)
- Dean's Award for Excellence, Baylor College of Medicine (2014)
- Undergraduate Scholarship, Fudan University (2011)
- Xi-Yuan Undergraduate Research Fellowship, Fudan University (2011)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

We study how the extraordinary diversity of cells and synapses in the brain is generated, organized, and maintained, and how these processes are disrupted in diseases such as neurodevelopmental disorders and brain cancer. By combining single-cell and spatial genomics, lineage tracing, perturbation screens, synaptic proteomics, and machine learning models, we aim to uncover the molecular rules that define neural identity and connectivity.

Our research spans two interrelated themes, each grounded in human biology and driven by cutting-edge technologies. By comparing these processes across species, we aim to uncover both conserved mechanisms and human-specific innovations that define the unique features of the human brain.
