#### BIO

Dr. David Spiegel is Willson Professor and Associate Chair of Psychiatry & Behavioral Sciences, Director of the Center on Stress and Health, and Medical Director of the Center for Integrative Medicine at Stanford University School of Medicine, where he has been a member of the academic faculty since 1975, and was Chair of the Stanford University Faculty Senate from 2010-2011. Dr. Spiegel has more than 40 years of clinical and research experience studying psycho-oncology, stress and health, pain control, psychoneuroendocrinology, sleep, hypnosis, and conducting randomized clinical trials involving psychotherapy for cancer patients. He has published thirteen books, 404 scientific journal articles, and 170 book chapters on hypnosis, psychosocial oncology, stress physiology, trauma, and psychotherapy. His research has been supported by the National Institute of Mental Health, the National Cancer Institute, the National Institute on Aging, the National Center for Complementary and Integrative Health, the John D. and Catherine T. MacArthur Foundation, the Fetzer Institute, the Dana Foundation for Brain Sciences, and the Nathan S. Cummings Foundation. He was a member of the work groups on stressor and trauma-related disorders for the DSM-IV and DSM-5 editions of the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders. He is Past President of the American College of Psychiatrists and the Society for Clinical and Experimental Hypnosis, and is a Member of the National Academy of Medicine. He was invited to speak on hypnosis at the World Economic Forum in Davos in 2018.

## Research & Scholarship

---

### CURRENT RESEARCH AND SCHOLARLY INTERESTS

Dr. Spiegel's research interests involve stress and health: cognitive control over somatic functions, including cancer progression, the response to traumatic stress, and the perception of pain and anxiety. He is currently conducting a large scale study of the relationships among sleep disturbance, diurnal stress hormone patterns, and breast cancer survival, sponsored by the National Cancer Institute. This work is based upon earlier evidence from his laboratory that loss of circadian variation in cortisol, indicative of HPA dysfunction, predicts early mortality with breast cancer.

Dr. Spiegel is also continuing study of the relationship between the acute response to trauma, including dissociative symptoms, and the development of post-traumatic stress disorder. He is also evaluating various methods of treating these symptoms.

Dr. Spiegel is carrying out studies of the neurophysiological components of hypnosis by studying brain correlates of hypnotic perceptual alteration, using PET, fMRI and diffusion tensor imaging. His research program is designed to examine neurophysiological and peripheral mechanisms through which psychological and social support may influence physical health.

### CLINICAL TRIALS

- Establishing a Dose-response Relationship With Accelerated Transcranial Magnetic Stimulation, Recruiting
- Examining the Effects of Regular Brief Internet-based Meditation Practice on Mental Health and Well Being, Recruiting
- Personalized Therapeutic Neuromodulation for Anhedonic Depression, Recruiting
- Rapid Acting TMS for Suicide Ideation in Depression, Recruiting
- Rapid Acting Transcranial Magnetic Stimulation, Recruiting
- The Effects of Stanford Accelerated Intelligent Neuromodulation Therapy on Explicit and Implicit Suicidal Cognition, Recruiting
