Bio

ACADEMIC APPOINTMENTS

- Emeritus Faculty - University Medical Line, Dermatology
- Member, Maternal & Child Health Research Institute (MCHRI)

ADMINISTRATIVE APPOINTMENTS

- Chair Department of Dermatology, Stanford University School of Medicine - Dermatology, (1995-2010)

HONORS AND AWARDS

- Department of Pediatrics Award for Outstanding in Study and Care of Children, The Ohio State University (1973)
- Assoc Award: Outstanding scientific knowledge, sound clinical judgment & excellent human relations, Children's Hospital of Los Angeles (1976)
- The Best Doctors in America, Naifeh, S., Smith, G.W. Woodward/White (1992-)
- Franklin G. Ebaugh Jr. Award for Advising Medical Students, Stanford School of Medicine (June 12, 2005)

PROFESSIONAL EDUCATION

- Bachelor of Science, University of Dayton , Pre-Medicine (1969)
- Doctor of Medicine, The Ohio State University , Medicine (1973)
- Master of Arts, Santa Clara University , Spirituality (2004)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Developing gene therapy for genetic skin diseases in children is a major focus of the Department of Dermatology. Specifically our efforts are on correcting the cutaneous basement membrane zone defects in epidermolysis bullosa. This requires coordination of the basic research and clinical care. Prior to developing gene therapy, we are creating better methods to give effective and efficient care to infants and children with rare and disabling genetic skin diseases including epidermolysis bullosa and ichthyosis. We are focused on giving comprehensive skin care in an environment that is supportive for the individual families as well as the communities

of families with similar diseases. Additional programs are being developed for infants and children with unusual and difficult to manage vascular malformations by coordinating teams of specialist who are focused on developing better methods to care for infants and children with these conditions.

I am also interested in clinical studies within the Neonatal Intensive Care Unit which include methods to understand the physiology and function of premature infant skin which is extremely fragile, easily injured and traumatized. We are interested in the ability of topical applications of products to protect and heal the premature infant's skin.

Ambulatory clinical studies include efforts to improve care of infants and children with atopic dermatitis. Clinical trials in other childhood skin diseases are also done.

Teaching

GRADUATE AND FELLOWSHIP PROGRAM AFFILIATIONS

- Dermatology (Fellowship Program)
