

Stefanie S. Jeffrey, MD

John and Marva Warnock Professor, Emerita
Surgery - General Surgery

Bio

BIO

Stefanie Jeffrey, MD, is the John and Marva Warnock Professor, Emerita and former Chief of Surgical Oncology Research in the Department of Surgery at Stanford University School of Medicine. She received her undergraduate degree in Chemistry and Physics and master's degree in Chemistry from Harvard University. She graduated from medical school at University of California San Francisco (UCSF), where she also completed her surgical residency. Her lab focused on technology development and applications related to liquid biopsy (CTCs, ctDNA, extracellular vesicles), droplet-based microfluidic platforms, and preclinical models for testing new cancer therapies. Dr. Jeffrey retired in September 2022, but still maintains collaborations with faculty in the School of Engineering.

ACADEMIC APPOINTMENTS

- Emeritus Faculty - University Medical Line, Surgery - General Surgery
- Member, Bio-X

ADMINISTRATIVE APPOINTMENTS

- Chief, Surgical Oncology Research, Stanford University, (2005-2022)
- Program Director, Interdisciplinary Breast Fellowship, Stanford University, (1999-2004)
- Chief, Breast Surgery, Stanford University, (1997-2004)

HONORS AND AWARDS

- John and Marva Warnock Professor, Stanford University (2011)
- NASA Space Act Board Award, National Aeronautics and Space Administration (2006)
- Certificate of Special Congressional Recognition, Congresswoman Anna Eshoo, U.S. House of Representatives, California 14th Congressional District (2004, 2013)
- Stanford Fellow, Stanford University (2002-2004)
- John and Marva Warnock Faculty Scholar in Cancer Research, Stanford University (2001-2011)
- Bessie Legarda Memorial Award, Makati Medical Center, Philippines (2000)
- Elsbach-Richards Faculty Scholar, Stanford University (1999-2001)
- Cowell Outstanding Faculty Physician Award, Stanford University (1999)
- Selected for inclusion in The Best Doctors in America, Woodward/White, Inc. - Best Doctors, Inc (1998, 2003-16)
- Fellow, American College of Surgeons (1987)
- AOA Honor Medical Society, UCSF (1977)
- Cum Laude in Chemistry and Physics, Harvard University (1974)

BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- Chair, Gordon Research Conference: Liquid Biopsy for Cancer (2017 - 2018)
- Member, External Advisory Board, Center of BioModular Multi-Scale Systems, NIH/NIBIB P41 Biomedical Technology Resource Center (2016 - present)
- Member, Scientific Advisory Board, Cancer-ID - EU consortium of 36 institutions from 13 countries to evaluate blood-based biomarkers (2015 - present)

PROFESSIONAL EDUCATION

- M.D., UCSF, Medicine (1978)
- M.A., Harvard University, Chemistry (1974)
- A.B., Harvard University, Chemistry and Physics (1974)

COMMUNITY AND INTERNATIONAL WORK

- Microarray analysis of Korean breast cancers, Stanford University

PATENTS

- Jose I. Padovani Blanco, Ali Mohamed Ibrahim, Yasser Hussein Anis, Stefanie S. Jeffrey, Roger T. Howe. "United States Patent 10,385,893 Electropermanent magnet activated microfluidic droplet size modulation", The Board of Trustees of the Leland Stanford Junior University, Aug 20, 2019
- Davis, Ronald W.; Jeffrey, Stefanie S.; Mindrinos, Michael N.; Pease, R. Fabian; Powell, Ashley A.; Talasaz, AmirAli Hajhossein. "United States Patent 9,267,943 Apparatus for Magnetic Separation of Cells", The Board of Trustees of the Leland Stanford Junior University, Feb 23, 2016
- Ronald W. Davis, Stefanie S. Jeffrey, Michael N. Mindrinos, R. Fabian Pease, Ashley Ann Powell, AmirAli Hajhossein Talasaz (alphabetical order). "United States Patent 8,071,395 Methods and Apparatus for Magnetic Separation of Cells", The Board of Trustees of The Leland Stanford Junior University, Dec 6, 2011

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

For the past decade, Dr. Jeffrey's lab has performed molecular profiling of cancer cells with the goal of identifying tumor-specific therapies for the personalized treatment of cancer.

She was a key member of the collaborative Stanford/Norway team that pioneered the use of DNA microarrays to measure global gene expression in solid tumors and that developed the currently accepted classification schema of breast cancer molecular subtypes based on gene expression profiles: including low and high proliferation luminal, ERBB2(HER2)-overexpressing, and basal-like breast cancers (then, focusing attention on triple-negative breast cancers, TNBCs). Her lab then refined RNA amplification techniques and developed expertise in the transcriptional profiling of tiny quantities of tumor tissue or RNA isolated from formalin-fixed paraffin-embedded tumor samples. It also developed a bank of patient-derived TNBCs for preclinical drug testing.

Her research currently involves extracting, profiling, and growing circulating tumor cells (CTCs) from blood and disseminated tumor cells (DTCs) from bone marrow to shed light on different tumor cell populations involved in the metastatic process and to help guide selection of appropriate therapies in individual cancer patients. To facilitate this, Dr. Jeffrey and colleagues from the Schools of Medicine, Engineering, and Genome Technology Center invented the MagSweeper, an automated immunomagnetic separation device that isolates live rare cells with high purity and minimal impact on gene expression for high dimensional single cell molecular analyses or tumor cell growth in culture. Her group is funded to continue this work through use or development of additional technologies, including both continuous-flow and droplet-based microfluidic devices, for antibody-based or label-free tumor cell capture, characterization, and growth. Tumor types being investigated include those from patients with primary or metastatic breast cancer or patients with colon cancer that has metastasized to the liver. Dr. Jeffrey's group also studies the role of

circulating tumor DNA (ctDNA) in evaluating efficacy of surgical resection of metastases from colorectal cancer. Her lab collaborates closely with Prof Amy Herr's group at UC Berkeley Bioengineering to determine protein signaling pathway activity in single tumor cells.

Dr. Jeffrey's lab is most recently funded to expand their studies on real-time capture and characterization of CTCs and other rare or associated cells, and their experience with patient-derived tumor models, toward pre-clinical development of potential new diagnostics or therapies for treating cancer, including prediction of hormone responsiveness (with Prof George Sledge), exosome-targeting (with Prof AC Matin), and use of metastases-inhibiting antibodies (with Prof Shoshana Levy).

In the past, Dr. Jeffrey worked with Dr. Robert Mah at NASA Ames Research Center to study multiplex in-vivo physiologic attributes of breast tumors in real-time using a multisensor NASA Smart Probe that she co-developed with Dr. Mah.

CLINICAL TRIALS

- Factors Influencing Decision-Making About the Use of Chemoprevention in Women at Increased Risk for Breast Cancer, Not Recruiting
- Molecular Analysis of Breast Cancer, Not Recruiting
- Molecular Analysis of Thoracic Malignancies, Not Recruiting
- Temozolomide to Reverse Androgen Insensitivity for Castration-resistant Prostate Cancer, Not Recruiting

Teaching

GRADUATE AND FELLOWSHIP PROGRAM AFFILIATIONS

- Cancer Biology (Phd Program)
