

# Stanford

---

## Timothy Angelotti MD, PhD

Associate Professor of Anesthesiology, Perioperative and Pain Medicine (ICU) at the Stanford University Medical Center

 NIH Biosketch available Online

 Curriculum Vitae available Online

### CLINICAL OFFICES

- **Anesthesia**

300 Pasteur Dr Rm H3580

MC 5640

Stanford, CA 94305

**Tel** (650) 498-7525

**Fax** (650) 725-8544

### ACADEMIC CONTACT INFORMATION

- **Alternate Contact**

Bernadette Carvalho

**Email** berniec@stanford.edu

### Bio

---

#### BIO

I specialize in the care of critically ill patients, whether that be during a Life Flight transport, the intensive care unit, or the operating room. My training and experiences have given me the opportunity to learn how to provide critical care services and high risk anesthesia services to a wide variety of adult patients.

#### CLINICAL FOCUS

- Critical Care
- Anesthesia

#### ACADEMIC APPOINTMENTS

- Associate Professor - Med Center Line, Anesthesiology, Perioperative and Pain Medicine
- Member, Cardiovascular Institute

#### ADMINISTRATIVE APPOINTMENTS

- Medical Director - Critical Care Transport, Stanford Life Flight, (2000- present)

#### HONORS AND AWARDS

- Dean's Award for Research Excellence, University of Michigan (1994)
- Alexander von Humboldt Foundation Post-Doctoral Fellowship, Alexander von Humboldt Foundation (1995-1996)
- Best of Meeting Award (82nd Annual IARS Congress), IARS (2008)

#### BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- Scientific Advisory Board, Spastic Paraplegia Foundation (2014 - present)

#### PROFESSIONAL EDUCATION

- Fellowship: Stanford University Anesthesiology Fellowships (2000) CA
- Residency: Duke University Medical Center Anesthesiology Residency (1999) NC

- Internship: St Joseph Mercy Ann Arbor Internal Medicine Residency (1995) MI
- Board Certification: Anesthesia, American Board of Anesthesiology (2000)
- Board Certification: Critical Care Medicine, American Board of Anesthesiology (2001)
- Medical Education: University of Michigan School of Medicine (1994) MI
- MD, University of Michigan (1994)
- PhD, University of Michigan , Pharmacology (1994)

## Research & Scholarship

---

### CURRENT RESEARCH AND SCHOLARLY INTERESTS

The sympathetic nervous system (SNS) functions as an integrative peripheral nervous system to regulate vital organ function, in part by release of norepinephrine (NE). Disease states as varied as Parkinson's disease, spinal cord injury, diabetes, heart failure, and sepsis can all lead to dysfunction of the SNS and patient morbidity. Feedback modulation of NE release occurs by activation of alpha2A and alpha2C adrenergic receptors (ARs) on sympathetic neurons. Neuropharmacological differences between these two autoreceptors are not completely known, thus limiting development of specific drugs for disease treatment.

Modulation of sympathetic neuron signaling occurs by feedback inhibition of neurotransmitter release (autoreceptors), mediated in part via alpha2A and/or alpha2C adrenergic receptors. Previous research suggests that these two AR subtypes may have overlapping but unique physiological roles in neuronal signaling; however the basis for these differences is not completely known. Cellular localization is an important determinant of specialized function between homologous receptors. Preliminary data in cultured sympathetic ganglion neurons (SGN) and other cell types have found different temporal and spatial components to alpha2A&C AR localization and trafficking. These differences may relate to characteristics of SGN in culture (e.g. neurotransmitter phenotype) and thus may be important determinants of differential alpha2A&C AR modulation of neurotransmitter release. Using an array of molecular and cellular approaches and single cell amperometric analysis of neurotransmitter release, it should be possible to further delineate the interplay between protein structure, cellular localization, and physiological function of each receptor subtype. Resultant discoveries will be relevant to other similar neuromodulatory systems involved in pain and neural processing, including cannabinoid, opiate, and metabotropic glutamate receptors.

### CLINICAL TRIALS

- Assess Safety and Efficacy of ELAD (Extracorporeal Liver Assist System) in Subjects With Alcohol-Induced Liver Failure, Not Recruiting

## Teaching

---

### GRADUATE AND FELLOWSHIP PROGRAM AFFILIATIONS

- Anesthesia (Fellowship Program)

## Publications

---

### PUBLICATIONS

- **Expression and trafficking of functional G protein-coupled receptors are related, yet distinct, concepts.** *Naunyn-Schmiedeberg's archives of pharmacology*  
Hurt, C. M., Angelotti, T.  
2014; 387 (10): 1009-1012
- **Common a2A and a2C adrenergic receptor polymorphisms do not affect plasma membrane trafficking.** *Naunyn-Schmiedeberg's archives of pharmacology*  
Hurt, C. M., Sorensen, M. W., Angelotti, T.
