

Stanford

David Schneider

Professor of Microbiology and Immunology
Microbiology & Immunology

Bio

ACADEMIC APPOINTMENTS

- Professor, Microbiology & Immunology
- Member, Bio-X
- Member, Maternal & Child Health Research Institute (MCHRI)

HONORS AND AWARDS

- Larry Sandler Award Memorial Award for best Drosophila thesis, Genetics Society of America (1993)
- New Scholar in Global Infectious Disease, Ellison Medical Foundation (2002-6)
- Senior Scholar Award in Aging, Ellison Medical Foundation (2008-12)
- NIH Director's Pioneer Award, NIH (2011)

PROFESSIONAL EDUCATION

- Ph.D., University of California, Berkeley , Molecular Biology (1992)
- B.Sc., University of Toronto , Biochemistry (1986)

- blog: <http://www.phasecurveblog.wordpress.com>

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

We study innate immunity and microbial pathogenesis. We have been studying models for a variety of bacterial infections including: *Listeria*, *Mycobacteria*, *Salmonella* and *Streptococcus* as well as some fungi, malaria and viruses. Our current focus is to determine how we recover from infections.

We are using a new approach to study the outcome of infections. We are starting by plotting health by microbe number over the course of infections. This produces characteristic phase plots that we think can be used to predict the outcome of infections and to define appropriate treatments. We like to assess "health" in whole animals rather than in vitro but we use a large range of tools ranging from genetics, to microarray analyses to flow cytometry.

We focus on two models. We recently started working on a mouse model for malaria in which we follow the progress of a *Plasmodium chabaudi* infection. We are making extremely multivariate plots of the disease process. Our goal is to define "biovectors" that predict the outcome of infection and to identify the physiological mechanisms required for recovery from infections.

We continue to work on fruit flies as a model for microbial pathogenesis. Here we take advantage of the spectacularly deep genetic tools available to *Drosophila* geneticists to discover mechanisms involved in pathogenesis and the recovery from infections.

Teaching

COURSES

2020-21

- Creative Visualization Studio: MI 260 (Aut, Win, Spr, Sum)

2019-20

- Creative Visualization Studio: MI 260 (Aut, Win, Spr, Sum)
- Foundations in Experimental Biology: BIOS 200 (Aut)
- Sculptural Data Illustrations: BIOS 256 (Spr)

2018-19

- Foundations in Experimental Biology: BIOS 200 (Aut)
- Sculptural Data Illustrations: BIOS 256 (Win, Spr)

2017-18

- Foundations in Experimental Biology: BIOS 200 (Aut)
- Immunology: Homeostasis and Disease: MI 214 (Win)
- Sculptural Data Illustrations: BIOS 256 (Win, Spr)

STANFORD ADVISEES

Doctoral Dissertation Reader (AC)

Rebecca Gellman, Bryan Merrill

Postdoctoral Faculty Sponsor

HanYuan Liu, Karthika Nagalekshmi, Theresia Reindl

GRADUATE AND FELLOWSHIP PROGRAM AFFILIATIONS

- Immunology (Phd Program)
- Microbiology and Immunology (Phd Program)
