

# Stanford

---

## E. John Harris Jr.

Professor of Surgery (Vascular) at the Stanford University Medical Center

Surgery - Vascular Surgery

 NIH Biosketch available Online

 Curriculum Vitae available Online

### CLINICAL OFFICES

- **Stanford Vascular Surgery**

300 Pasteur Dr Rm M121

MC 5639

Stanford, CA 94305

**Tel** (650) 723-8648

**Fax** (650) 723-3600

### ACADEMIC CONTACT INFORMATION

- **Alternate Contact**

Sarah Lee - Administrative Associate

**Email** saylee@stanford.edu

**Tel** 1-6709

## Bio

---

### CLINICAL FOCUS

- Vascular Surgery

### ACADEMIC APPOINTMENTS

- Professor - Med Center Line, Surgery - Vascular Surgery

### ADMINISTRATIVE APPOINTMENTS

- President-Elect, Northern California Vascular Society, (2001-2003)
- President, Northern California Vascular Society, (2003-2005)

### PROFESSIONAL EDUCATION

- Medical Education: Saint Louis University School of Medicine (1985) MO
- Residency: Oregon Health Science University (1991) OR
- Internship: Oregon Health Science University (1986) OR
- Board Certification: Vascular Surgery, American Board of Surgery (1994)
- Fellowship: Oregon Health Sciences Univ Hospital (1992) OR
- MD, Saint Louis University, Medicine (1985)

## Research & Scholarship

---

### CURRENT RESEARCH AND SCHOLARLY INTERESTS

I am interested in the role of thrombosis in stimulating venous wall morphologic change. Our preliminary data suggests thrombin, which is biologically active and intercalated in the thrombus, stimulates thrombin receptors in the venous wall leading to wall thickening. We have a model of DVT in the rat we are investigating and we are using a similar model in mice, some of which are knockouts and transgenics with various risk factors for thrombosis deleted or overexpressed. We are looking to develop new ways to prevent chronic venous wall thickening following DVT, which we see with ultrasound studies in patients with post-thrombotic venous

insufficiency. I also have an interest in non-invasive vascular imaging. Current projects include the development of a 3-D color Duplex ultrasound and evaluation of differential arterial blood flow during moderate exercise using real time MRI and a special visualizer software program. We are evaluating and comparing differential flow increases in normal volunteers and patients with intermittent claudication. Such a tool could then be used to evaluate the efficacy of certain treatments for claudication.

## CLINICAL TRIALS

- Endovascular Repair of Abdominal Aortic Aneurysms, Not Recruiting
- Endurant Stent Graft System Post Approval Study (ENGAGE PAS), Not Recruiting
- Plaque Removal Versus Open Bypass Surgery For Critical Limb Ischemia, Not Recruiting
- PRESERVE-Zenith® Iliac Branch System Clinical Study, Not Recruiting
- Zenith(R) Low Profile AAA Endovascular Graft Clinical Study, Not Recruiting

## Publications
