Bio

BIO

Richard Fikes has a long and distinguished record as an innovative leader in the development of techniques for effectively representing and using knowledge in computer systems. He is best known as co-developer of the STRIPS automatic planning system, KIF (Knowledge Interchange Format), the Ontolingua ontology representation language and Web-based ontology development environment, the OKBC (Open Knowledge Base Connectivity) API for knowledge servers, and IntelliCorp's KEE system. At Stanford, he led projects focused on developing large-scale distributed repositories of computer-interpretable knowledge, collaborative development of multi-use ontologies, enabling technology for the Semantic Web, reasoning methods applicable to large-scale knowledge bases, and knowledge-based technology for intelligence analysts. He was principal investigator of major projects for multiple Federal Government agencies including the Defense Advanced Research Projects Agency (DARPA) and the Intelligence Community's Advanced Research and Development Activity (ARDA).

ACADEMIC APPOINTMENTS

- Emeritus Faculty, Acad Council, Computer Science

ADMINISTRATIVE APPOINTMENTS

- Director, Stanford's Knowledge Systems Laboratory, (1991-2006)

HONORS AND AWARDS

- Elected as a Founding Fellow, America Association for Artificial Intelligence (1990)
