Bio

BIO

Professor Silverstein conducts research in theoretical physics -- particularly gravitation and cosmology, as well as recently developing new methods and applications for machine learning.

What are the basic degrees of freedom and interactions underlying gravitational and particle physics? What is the mechanism behind the initial seeds of structure in the universe, and how can we test it using cosmological observations? Is there a holographic framework for cosmology that applies throughout the history of the universe, accounting for the emergent effects of horizons and singularities? What new phenomena arise in quantum field theory in generic conditions such as finite density, temperature, or in time dependent backgrounds?

Professor Silverstein attacks basic problems in several areas of theoretical physics. She develops concrete and testable mechanisms for cosmic inflation, accounting for its sensitivity to very high energy physics. This has led to a fruitful interface with cosmic microwave background research, contributing to a more systematic analysis of its observable phenomenology.

Professor Silverstein also develops mechanisms for stabilizing the extra dimensions of string theory to model the accelerated expansion of the universe. In addition, Professor Silverstein develops methods to address questions of quantum gravity, such as singularity resolution and the physics of black hole and cosmological horizons.

Areas of focus:

- optimization algorithms derived from physical dynamics, analyzing its behavior and advantages theoretically and in numerical experiments
- UV complete mechanisms and systematics of cosmic inflation, including string-theoretic versions of large-field inflation (with gravity wave CMB signatures) and novel mechanisms involving inflaton interactions (with non-Gaussian signatures in the CMB)
- Systematic theory and analysis of primordial Non-Gaussianity, taking into account strongly non-linear effects in quantum field theory encoded in multi-point correlation functions
- Long-range interactions in string theory and implications for black hole physics
- Concrete holographic models of de Sitter expansion in string theory, aimed at upgrading the AdS/CFT correspondence to cosmology
- Mechanisms for non-Fermi liquid transport and singularities from strongly coupled finite density quantum field theory
- Mechanisms by which the extra degrees of freedom in string theory induce transitions and duality symmetries between spaces of different topology and dimensionality

ACADEMIC APPOINTMENTS

- Professor, Physics

ADMINISTRATIVE APPOINTMENTS

- Postdoctoral Fellow, Rutgers University, (1996-1997)
- Permanent Member and Visiting Professor of Physics, Kavli Institute for Theoretical Physics, University of California, Santa Barbara, (2009-2010)
- Assistant Professor, Stanford Linear Accelerator Center, Stanford University, (1997-2001)
- Associate Professor, Stanford University, SLAC and Physics Department, (2001-2006)
- Professor, Stanford University, SLAC and Physics Department, (2006-2017)
- Professor, Stanford University Department of Physics, (2006- present)

HONORS AND AWARDS

- Member, American Academy of Arts and Sciences (2020)
- Investigator, Simons Foundation (2017)
- Fellow, American Physical Society (2016)
- Bergmann Memorial Award, Israel-U.S. Binational Science Foundation (2000)
- Fellowship, MacArthur Foundation (1999-2004)
- Fellowship, Alfred P Sloan Foundation (1999)
- Outstanding Junior Investigator Award, Department of Energy (1999)

BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- Advisory Board, Canadian Institute for Advanced Research, Gravity and Cosmology
- PI, Simons Foundation Origins of the Universe program, Modern Inflationary Cosmology (2017 - present)
- General Member, Aspen Center for Physics (2015 - 2020)
- Coordinator, KITP Primordial Cosmology program and conference (2013 - 2013)
- Co-director, ICTP Spring School (2011 - 2013)
- Advisory Council, Princeton University Department of Physics (2009)
- Member, Inflationary Theory Working Group: CMBPOL (2008 - 2008)
- Advisory Board, Kavli Institute for Theoretical Physics (2004 - 2007)
- General Member, Aspen Center for Physics (1999 - 2006)
- Member, Institute for Advance Study, Princeton (1999 - 1999)

PROFESSIONAL EDUCATION

- B.A., Harvard University , Physics (1992)
- PhD., Princeton University , Physics (1996)
