Postdoctoral Scholar, Genetics

Bio

BIO

Hi I am a masters student in the ICME. I also interned with Yoshua Bengio over the summer of 2016 and published a theoretical paper(first author). It was presented at ICASSP 2017 in a lecture session. I am interested in using my mathematical skills to improve the world. I am looking for opportunities to improve energy distribution, sustainability, poverty and other like minded things.

I am also keenly interested in improv and how it can improve my mental approach to life. I plan on getting involved in the improv scene in New York for one year starting in the summer of 2017!
