Bio

ACADEMIC APPOINTMENTS

- Professor, Biochemistry
- Professor (By courtesy), Chemical and Systems Biology
- Member, Bio-X
- Member, Maternal & Child Health Research Institute (MCHRI)
- Faculty Fellow, Sarafan ChEM-H
- Member, Stanford Cancer Institute
- Member, Wu Tsai Neurosciences Institute

ADMINISTRATIVE APPOINTMENTS

- Chairperson, Department of Biochemistry, (2019- present)
- Chairperson, Basic Science Chairs, (2021-2023)
- Senator, Stanford University Faculty Senate, (2019-2020)
- Chairperson, Committee on Graduate Admissions and Policy, (2017-2018)

HONORS AND AWARDS

- ASCB Lifetime Fellow, American Society for Cell Biology (2022)
- Mayent-Rothschild Institute Curie Award, Institute Curie (2019)
- Stanford Faculty Excellence in Teaching Award, Stanford Medical School (2014)
- American Cancer Society Research Scholar, American Cancer Society (2011-2014)
- Gordon Family Scholar of the Damon Runyon Foundation, Damon Runyon Cancer Research Foundation (2005-2007)
- Damon Runyon Postdoctoral Fellow, Damon Runyon Cancer Research Foundation (1998-2001)
- Dartmouth College Senior Fellow, Dartmouth College (1989)

BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- External Scientific Advisor, 4D Nucleome Project - NIH Common Fund (2015 - 2020)
- Fellowship Award Committee, Damon Runyon Cancer Research Foundation (2018 - present)
- Scientific Advisory Board, LifeTime Initiative (2018 - present)

PROFESSIONAL EDUCATION

- BA, Dartmouth College , Biology (1989)
- Ph.D., University of California at San Francisco , Biochemistry (1998)
- Post-Doctoral Fellow, Harvard Medical School , Cell Biology (2003)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Our goal is to understand how chromosomes are faithfully transmitted during cell division and how chromosomes are structured and organized in the nucleus. Many cellular processes act on the chromosome to specialize different chromosomal domains for unique functions in the biology of cells. One of the best examples of a specialized chromatin domain is the eukaryotic centromere and kinetochore that forms at a single site on each human chromosome and ensures the proper segregation of the genome during each cell division cycle. The laboratory studies the genetic and epigenetic mechanisms that control the formation of human centromeres and kinetochores. Cells use a variety of different mechanisms to change the function of chromosomes. We have also focused on understanding how RNAs that associate with chromosomes regulate the reorganization of chromatin into silent heterochromatic domains. Our recent efforts have been directed at understanding how long range interactions between chromosomes are used to organize the genome within the nucleus and to control gene expression and chromosome dynamics. We use a combination of digital microscopy to extract quantitative information about the dynamics of chromosomes in living cells, biochemical reconstitution to assemble chromatin and chromosomes in vitro, and genetics to manipulate the chromosome segregation process in order to study how chromosome-distribution systems function in eukaryotes.
