Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

My research focuses on trapping and controlled manipulation of sub-micron sized particles. The work included modeling, fabrication and testing of chips that employ optical forces and/or dielectrophoretic forces to trap and transport nanoparticles. Our goal is to develop lab-on-a-chip systems for biomedical and chemical applications.

PROJECTS

- Plasmonic trapping and manipulation of nanoparticles - Stanford University (9/1/2014 - present)
