

Tushar Desai

Associate Professor of Medicine (Pulmonary and Critical Care)
Medicine - Pulmonary & Critical Care Medicine

CLINICAL OFFICES

- **Chest Clinic**

300 Pasteur Dr Rm A283

MC 5351

Stanford, CA 94305

Tel (650) 725-7061 **Fax** (650) 498-6288

Bio

BIO

Dr. Tushar Desai specializes in the treatment of general pulmonary and Interstitial Lung Diseases like Idiopathic Pulmonary Fibrosis (IPF). He has practiced pulmonary medicine since 2002.

Dr. Desai has a special interest in understanding the development and progression of diseases like IPF, Chronic Obstructive Pulmonary Disease (COPD), and lung adenocarcinoma, as well as in understanding how native lung stem cells function to repair the lung gas exchange surface after injury.

CLINICAL FOCUS

- Pulmonary Disease
- Interstitial Lung Diseases

ACADEMIC APPOINTMENTS

- Associate Professor, Medicine - Pulmonary & Critical Care Medicine
- Member, Bio-X
- Member, Child Health Research Institute
- Member, Institute for Stem Cell Biology and Regenerative Medicine
- Member, Stanford Cancer Institute

HONORS AND AWARDS

- Genome Editing to Correct Cystic Fibrosis Mutations in Airway Stem Cells, California Institute of Regenerative Medicine (CIRM) (2017-2019)
- Woods Family Endowed Faculty Scholar, Stanford Child Health Research Institute (2016-2021)
- In Situ Identification and Mapping of Alveolar Stem Cells at Single Cell Resolution in Human Lungs, NIH/NHLBI (2016-2017)
- A Genetic Dissection of Lung Adenoma Initiation and Progression, American Lung Association, Lung Cancer Discovery Award (2015-2017)
- Selective Aging of the Lungs: Using Conditional Klotho Deletion to Identify the Basis for Emphysema, Glenn Center for the Biology of Aging Seed Grant 2014 (2015-2017)
- Single Cell Profiling and in vivo Cellular Interrogation of Alveolar Stem Cells, NIH/NHLBI (2015-2016)

- In Situ Transcriptome Profiling in Histological Sections, Stanford Bio-X Interdisciplinary Initiatives Program 2014 (2014-2016)
- Interrogation of Individual Cells to Identify Progenitor Cells and Their Niches (U01), NIH/NHLBI (2014-2016)
- ITI Faculty Seed Grant 2014, Stanford Institute for Immunity, Transplantation, and Infection (2014-2015)
- Development and Maintenance of the Alveolar Type 1 Cell (K08), NIH/NHLBI (2008-2013)
- Fellowship in Pulmonary Research, Parker B. Francis Foundation (2006-2009)
- Retinoic Acid in Early Lung Morphogenesis, GlaxoSmithKline Pulmonary Fellowship Award (2002-2003)
- Robert Dawson Evans Fellow Excellence in Teaching Award, Boston University School of Medicine, Department of Internal Medicine (2000)
- House Officer Research Award, University of Michigan Hospitals, Department of Internal Medicine (1998)
- Worth F. Bloom M25 Prize, Tufts University School of Medicine (1995)

BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- Member, Scientific Advisory Board, UK Regenerative Medicine Platform, Engineered Cell Environment Hub (2018 - present)
- Member, Scientific Advisory Committee, American Thoracic Society (ATS) (2015 - present)

PROFESSIONAL EDUCATION

- Medical Education: Tufts University (1995) MA
- Internship: University of Michigan Medical Center (1996) MI
- Residency: University of Michigan Medical Center (1998) MI
- Board Certification: Pulmonary Disease, American Board of Internal Medicine (2001)
- Fellowship: Boston University School of Medicine (2002) MA
- BA, Amherst College , Psychology (1991)
- MD, MPH, Tufts University School of Medicine , Medicine, Public Health (1995)

PATENTS

- Tushar Desai, Pehr Harbury, Daniel Riordan. "United States Patent 62/475,090 Molecular profiling using proximity ligation- in situ hybridization", Leland Stanford Junior University, Mar 22, 2017

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

We attempt to deeply characterize the normal biology of the lung, in vivo and at single cell resolution, using powerful and precise genetic and genomic tools. We then apply our fundamental understanding of lung biology to investigate which specific processes have gone awry in particular lung diseases, using a combination of experimental models and analysis of primary human disease samples. Our belief is that dissecting the specific mechanisms of disease pathogenesis will enable the rational design of highly targeted therapies that have the potential to halt disease without conferring significant off-target toxicities.

Teaching

COURSES

2017-18

- Advanced Cell Biology: BIO 214, BIOC 224, MCP 221 (Win)

STANFORD ADVISEES

Postdoctoral Faculty Sponsor

Monica Nagendran

GRADUATE AND FELLOWSHIP PROGRAM AFFILIATIONS

- Cancer Biology (Phd Program)
- Medicine (Masters Program)
- Pulmonary & Critical Care Medicine (Fellowship Program)
- Stem Cell Biology and Regenerative Medicine (Phd Program)
