

Stanford

Salvatore Mancuso

Senior Business Intelligence Analyst, H&S Dean's Office

Bio

BIO

I am a connoisseur of extraordinary gizmos & lover of fine cheeses. I only moonlight as a data nerd at Stanford University.

CURRENT ROLE AT STANFORD

Sal Mancuso is an experienced data engineer who joins The PRIDE Study as the LGBTQ+ Digital Health Research Data Engineer. Sal spent nearly seven years with Stanford University's Graduate School of Business (GSB), most recently leading the data engineering unit within the Data, Analytics, and Research Computing (DARC) team. The DARC team engages directly with Ph.D. students, researchers, and faculty members, preparing large-scale datasets, assisting with data analysis, and consulting research design. Before joining Stanford, Sal worked for several technology companies, including Apple Computer, Tivo (formally Rovi), and Sun Microsystems (now ORACLE), where he leveraged both his fondness for data and his passion for coding. Sal is eager to practice his data craft to elevate the adoption and impact of The PRIDE Study.
