Bio

BIO

Ross Shachter joined Stanford's faculty directly after receiving his Ph.D. degree. His doctoral dissertation developed a method for purchasing an expert's forecast that encourages accurate revelation of the expert's beliefs as probabilities. Since then his research has focused on the representation, manipulation, and analysis of uncertainty and probabilistic reasoning in decision systems. He developed many of the fundamental methods for analyzing Bayesian belief networks and influence diagrams, and showed how they could be used by people and machines to communicate complex relationships among uncertain quantities, decisions, and objectives. His current research focuses on modeling uncertain processes and decision-making, including medical policy, meta-analysis, and intelligent systems. He has analyzed cancer screening processes for bladder and breast cancer and vaccination strategies for HIV and Helicobacter pylori.

His research interests include:

Influence diagram knowledge representation and solution;

Intelligent decision systems;

Medical decision analysis;

Decision analysis fundamentals; and

Planning under uncertainty

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Prof. Shachter joined Stanford's faculty directly after receiving his Ph.D. degree. His doctoral dissertation developed a method for purchasing an expert's forecast that encourages accurate revelation of the expert's beliefs as probabilities. Since then his research has focused on the representation, manipulation, and analysis of uncertainty and probabilistic reasoning in decision systems. As part of this work, he developed the DAVID influence diagram processing system for the Macintosh. He has developed models scheduling patients for cancer follow-up, and analyzing vaccination strategies for HIV and *Helobacter pylori*.

He has worked closely with many students in Bioinformatics, where he holds a courtesy appointment. He has been active in the Conference on Uncertainty in Artificial Intelligence, is a full member of INFORMS and its Decision Analysis Society. He has held memberships in the American Association for Artificial Intelligence, the Society for Medical Decision Making, and the Society for Decision Professionals.
