Josef Hardi

Software Dvlpr 3, Med/BMIR

Bio

BIO

I'm a software engineer with a keen interest in data science. I have over 10 years' experience in software development and 5 years in the data processing. Currently, I work as a backend developer for the Stanford Center of Biomedical Informatics Research; tackling issues in data and metadata management and interoperability. I also actively engage in the work of converting health and claim records to the OMOP common data model as part of my collaboration with the Stanford Population Health Sciences. I have experience with Java, Python, R, RDF, OWL, OBDA, Schema.org and Elasticsearch.

EDUCATION AND CERTIFICATIONS

- MSc, Libera Università di Bolzano , Software Engineering (2010)
