Bio

BIO

I joined Stanford University in 2015 as a Clinical Professor of Pediatrics in the Division of Hematology/ Oncology, Stem Cell Transplantation and Regenerative Medicine, having completed my training in Pediatric Hematology/ Oncology at Childrens Hospital Los Angeles. My areas of clinical expertise have been in the areas of transplantation for immune deficiencies and immune reconstitution post HSCT. I have been actively involved with the care and treatment of children with primary immune deficiencies and work with the Primary Immune Deficiencies Consortium (PIDTC). I am very interested in cellular therapies as a treatment modality for rare genetic diseases. I currently am the PI for several gene therapy trials at Stanford for various disorders including cerebral adrenoleukodystrophy (cALD), Sickle Cell Anemia, Thalassemia and Pyruvate Kinase Deficiency. My other main areas of research have been in studying the late effects of patients following stem cell transplantation, in specific the neurocognitive function post HSCT. I have been involved with several national committees addressing the late effects of HSCT within the ASBMT and COG.

In addition to my research work in stem cell transplantation, I have been actively involved with mentorship and graduate medical education. I am currently the Program Director for the Hematology/ Oncology Fellowship and serve as a mentor through the Pediatric Mentoring Group.
