Bio

BIO

I am the Ray Lyman Wilbur Professor of Statistics and, by courtesy, of Biomedical Data Science and of the Institute of Computational and Mathematical Engineering (ICME) at Stanford University. I am also Co-director of the Center for Innovative Study Design (CISD) at the Stanford University School of Medicine. I have supervised 73 Ph.D. theses and seven postdoctoral trainees. I have published over 300 papers, many of which are in clinical trial design and analysis, population pharmacokinetics and pharmacodynamics, survival analysis, longitudinal data analysis, multiple endpoints, biomarkers, adaptive methods, sequential analysis and time series.

ACADEMIC APPOINTMENTS

- Professor, Statistics
- Professor (By courtesy), Biomedical Data Science
- Member, Stanford Cancer Institute
- Member, Wu Tsai Neurosciences Institute

ADMINISTRATIVE APPOINTMENTS

- Core Member, Center for Precision Mental Health and Wellness, Stanford University, (2018- present)
- Faculty Fellow, Center for Innovations in Global Health, Stanford University, (2018- present)
- Ray Lyman Wilbur Professor, Stanford University, (2017- present)
- Professor, by courtesy, of Biomedical Data Science (formerly Health Research and Policy), Stanford School of Medicine, (2015- present)
- Co-chair, Program in Mathematical and Computational Finance, Stanford University, (2014- present)
- Director, Financial and Risk Modeling Institute., Stanford University, (2012- present)
- International Advisory Committee Member, Mathematical Sciences Center, Tsinghua University, (2012- present)
- Advisory Committee Member, Institute of Mathematical Research, University of Hong Kong, (2011- present)
- Chair, Pao-Lu Hsu Distinguished Lecture Series in Statistics and Probability, Center for Mathematical Sciences, Tsinghua University, (2011- present)
- International Advisory Committee Member, Center for Statistical Sciences, Peking University, (2010- present)

- Co-director, Center for Innovative Study Design, Stanford School of Medicine, (2009- present)
- Professor, by courtesy, of the Institute of Computational and Mathematical Engineering, Stanford School of Engineering, (2009- present)
- Professor, by courtesy, of Health Research and Policy, Stanford School of Medicine, (2007-2015)
- Steering Committee, Methods of Analysis Program in the Social Sciences, Stanford University, (2005- present)
- Co-director, Biostatistics Core, Stanford Cancer Center, (2005-2016)
- Director, Interdisciplinary Program in Financial Mathematics, Stanford University, (2005-2014)
- Chair, School of Statistics, Chinese Academy of Sciences, (2003- present)

PROFESSIONAL EDUCATION

- B.A. with First Class Honors, University of Hong Kong , Mathematics (1967)
- M.A., Columbia University , Mathematical Statistics (1970)
- Ph.D., Columbia University , Mathematical Statistics (1971)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

Lai is widely recognized as a prolific leader in the field of sequential statistical analysis. Among his principal achievements is the development of a comprehensive theory of sequential tests of composite hypotheses, unifying previous approaches and providing far-reaching extensions to cope with the practical complexities that arise in the applications to group sequential clinical trials. In particular, this theory paved the way for his ground-breaking work with Shih on flexible and nearly-optimal group sequential tests that can "self-tune" to the unknown parameters during the course of the trial, under pre-specified constraints on the maximum sample size and significance level.

Other major breakthroughs include (a) accurate confidence intervals following sequential tests by using an innovative resampling approach, (b) a definitive solution to the long-standing "multi-armed bandit problem", and (c) the development of statistically and computationally efficient sequential change-point detection procedures in multivariate time series and stochastic systems, for applications to industrial quality control, fault detection in engineering systems and segmentation in computational biology.

Besides sequential analysis, Lai has also made ground-breaking contributions to (i) stochastic approximation and recursive estimation, (ii) adaptive control of linear stochastic systems and Markov decision processes, (iii) saddlepoint approximations and boundary-crossing probabilities in Markov random walks and random fields, and (iv) survival analysis, in particular, rand- and M-estimators in regression models when the response variable is subject to censoring and truncation, and interim analysis of clinical trials with failure-time endpoints.
