

## Shannon Wiltsey Stirman

Associate Professor of Psychiatry and Behavioral Sciences (Public Mental Health and Population Sciences) at the Palo Alto Veterans Affairs Health Care System

 Curriculum Vitae available Online

### CONTACT INFORMATION

- **VA email address**

**Email** shannon.wiltsey-stirman@va.gov

### Bio

---

#### BIO

Shannon Wiltsey Stirman received her PhD in Clinical Psychology from the University of Pennsylvania. She completed an internship at the VA Palo Alto Healthcare System, and returned to Philadelphia for postdoctoral training, where she received an NIMH-funded K99/R00 award to study implementation and sustainability of CBT in a partnership between Penn and the City of Philadelphia's Department of Behavioral Health and disAbility Services to implement cognitive therapy across the city's network of providers. In 2009, Dr. Stirman joined the Women's Health Sciences Division of the VA National Center for PTSD and the Department of Psychiatry at Boston University. She was a Fellow of the NIMH and VA-funded Implementation Research Institute, and later served as an expert faculty member. In 2015, Dr. Stirman transitioned to the Dissemination and Training Division of the National Center for PTSD, where she currently serves as Acting Deputy Director, and joined the Stanford faculty in 2016. She was awarded the Association of Behavior and Cognitive Therapy's Mid-Career Innovator award in 2018 and serves on the board of the Society for Implementation Research Collaboration. Her research has been funded by the National Institute of Mental Health and the Canadian Institute for Health Research.

#### ACADEMIC APPOINTMENTS

- Associate Professor - Med Center Line, Psychiatry and Behavioral Sciences

#### ADMINISTRATIVE APPOINTMENTS

- Acting Deputy Director, Dissemination and Training Division, National Center for PTSD, (2018- present)

#### BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- Member-at-Large, Board of Directors, American Psychological Association (2019 - present)
- Senior Leader, Dissemination and Implementation Special Interest Group, Association for Behavioral and Cognitive Therapy (2018 - present)
- Board of Directors, Chair of the Established Network of Expertise, Society for Implementation Research Collaboration (2018 - present)

#### COMMUNITY AND INTERNATIONAL WORK

- Sonoma County Wildfire Mental Health Collaborative

## Research & Scholarship

---

### CURRENT RESEARCH AND SCHOLARLY INTERESTS

The overarching goal of my program of research is to determine how to facilitate the high quality delivery of evidence-based psychosocial interventions (EBPs) in public sector mental health settings. Areas of emphasis include training and consultation, treatment fidelity and adaptation, and the identification of strategies that promote sustained implementation of EBPs. In my early work, I examined the degree to which the randomized controlled trial (RCT) literature included individuals with characteristics like those seen in routine care settings. This work highlighted some gaps in the literature, but largely demonstrated that the RCT literature may be more applicable to typical clients in routine care settings than previously assumed.

This early work also led me to become interested in developing and studying strategies to promote the implementation and sustained use of EBPs in public sector settings. My research group's systematic review of research on sustainability suggested that EBPs are often fully or partially discontinued a short time after they are introduced into routine care settings. Identification of factors associated with sustained implementation is therefore an important step in promoting the long-term success of implementation efforts. Through my recently completed K99/R00 award, I used qualitative and quantitative methods to examine system, organizational, clinician, and patient-level influences on the long-term trajectory of clinicians' use of cognitive therapy.

The degree of fidelity (adherence to the protocol and skill of delivery) with which EBPs are delivered, and adaptations to EBPs made in routine care, are key implementation outcomes. Without time- and cost-intensive direct observation, these outcomes are difficult to assess. I received an R21 to develop a strategy for assessing EBP fidelity that uses materials generated during routine sessions. If this effort is successful, the burden associated with fidelity assessment and support in both clinical trials and in implementation initiatives could be reduced dramatically.

As a first step toward understanding the implications of different types of adaptations to EBPs, my colleagues and I also developed a framework for identifying and classifying adaptations that are made to EBPs in routine care. This framework makes it possible to determine whether specific types of adaptations lead to different clinical or implementation outcomes. Using the framework, we have identified evidence that clinicians do make changes to EBPs in their own practice, and that certain clinician characteristics predict the use of adaptations that are inconsistent with the protocol.

While the work described above is based on observation of implementation efforts and has laid important groundwork for future research, my larger goal is to develop and test strategies to facilitate high-quality implementation of EBPs in routine care settings. Beyond the growing recognition that workshops, web-based trainings, and manuals alone are insufficient, little is known about strategies to train and prepare clinicians to deliver EBPs with fidelity in public sector mental health settings. My collaborators and I recently completed data collection for a fully-powered hybrid implementation/effectiveness RCT that compares consultation alone, consultation combined with observation, and a fidelity-monitoring alone strategy for training clinicians to deliver Cognitive Processing Therapy (CPT) for PTSD.

The next step is to find ways to sustain the use of EBPs after initial training and implementation. In one of the first studies of strategies to promote sustainment of EBPs, my collaborators and I are following up with a study that compares a fidelity-oriented learning collaborative strategy to a continuous quality improvement-oriented learning collaborative to support the ongoing use of an EBP in three large mental health systems.

### CLINICAL TRIALS

- Sustaining and Improving Clinicians' Use of Evidence-Based Psychotherapy (EBP) for PTSD, Recruiting

## PROJECTS

- Innovative Methods to Assess Psychotherapy Practices (imAPP) - National Center for PTSD and Stanford University
- Improving and Sustaining CPT for PTSD in Mental Health System - National Center for PTSD, Stanford University

## Teaching

---

### STANFORD ADVISEES

#### Postdoctoral Research Mentor

Matthew Beristianos
