

Stanford

Zhijuan Cao

Instructor, Neurosurgery

Bio

BIO

I am an instructor in Dr. Gary Steinberg's lab in the Department of Neurosurgery. My main interest is to understand the underlying cellular and molecular mechanisms after stroke and to find the therapeutic targets for brain repair and stroke recovery. My PhD. thesis work demonstrated the acute and sustained neuroprotection by the pharmacological hypothermia in ischemic stroke animal model, providing a novel hypothermia treatment for stroke application. Before that, I detected the role of innate immune signaling pathways from toll-like-receptor family in myocardial infarction. My current work focuses on using optogenetic strategies to stimulate the targeted neurons for brain repair after stroke and detecting the neural circuit and molecular mechanisms underlying the stroke recovery.

ACADEMIC APPOINTMENTS

- Instructor, Neurosurgery

HONORS AND AWARDS

- Trainee Professional Development Award, Society for Neuroscience (2019)
- Postdoctoral Fellowship, American Heart Association (AHA) (2017-2019)
- Best Poster award in Third Annual cardiovascular Research Institute Symposium, Baylor College of Medicine, Houston, TX (2015)
- Dean's Awards for Excellence, Baylor College of Medicine, Houston, TX (2015)
- First Place Award for Best Posters at the 27th BCM Annual Graduate Student Symposium,, Baylor College of Medicine, Houston, TX (2015)
- Third place poster award, Medical World Americas Conference, Houston, TX (2015)
- Pre-doctoral Fellowship, American Heart Association (AHA) (2013-2015)
- Outstanding graduation thesis, Nanjing Medical University, Nanjing, Jiangsu, China (2010)

BOARDS, ADVISORY COMMITTEES, PROFESSIONAL ORGANIZATIONS

- Member, American Heart Association (2011 - present)
- Member, American Physiological Society (2012 - present)

Research & Scholarship

CURRENT RESEARCH AND SCHOLARLY INTERESTS

My current research focuses on:

- 1) using optogenetic strategies to stimulate targeted neurons for brain repair after stroke.
- 2) detecting the neural circuit and molecular mechanisms underlying stroke recovery.
