Bio

BIO

I am a senior software engineer in the Dubra Lab at The Byers Eye Institute, where I work on developing novel ophthalmic imaging instrumentation for improving the understanding, diagnosing and management of eye disease.

My interest in computer science started early in life and led me to obtain master's degree at Częstochowa University of Technology (Poland). After graduating, I contributed to the advancing of spectral domain optical coherence tomography (OCT) and pioneering of swept-source OCT for retinal imaging as part of Canon Ophthalmic Technologies (Poland). This work resulted in two commercially successful instruments, the Xephilio OCT-A1 and the Xephilio OCT-S1, which are sold worldwide.

My current work focuses on innovations that allow the translation of Adaptive Optics Ophthalmoscopy from a research tool into a mature technology that improves eye care.

EDUCATION AND CERTIFICATIONS

- Master degree, Częstochowa University of Technology (Poland) , Computer science (2010)

Publications

PUBLICATIONS

- **Sub-diffraction adaptive optics fluorescence imaging of the living human eye using pixel reassignment**
