EDUCATION

- **Stanford University** Stanford, CA
Doctor of Philosophy (Ph.D.), Management Science and Engineering *Mar. 2026 (Anticipated Graduation)*
- **University of Auckland** Auckland, New Zealand
Masters of Engineering in Engineering Science Research *Feb 2020. - May. 2021*
Bachelor of Engineering in Engineering Science with 1st class honours *Feb. 2016 - Nov. 2019*

WORK EXPERIENCE

- **Amazon.com, Inc.** Sydney, Australia
Operations Analyst Intern: Fulfillment By Amazon (FBA) team *Nov. 2018 - Feb. 2019*
 - Analysed over 10 years of data, identified seasonal and general trends, and connected with local and global stakeholders to determine how inbound volumes forecasts at Amazon fulfilment centers can be improved
 - Developed an **additive time-series model** that outperformed models used in Australia; increased forecasting accuracy by **30%**; reduced labour cost at fulfilment centers by **\$50k** per annum
 - Created an interactive dashboard, and suggested labour planning improvement strategies to senior management
 - Identified, organised, and trained fulfilment center associates with advanced excel skills to automate procedures
 - Voiced with FBA team the difficulty to navigate the seller onboarding tool, leading to a user-interface redesign

RESEARCH EXPERIENCE

- **Stanford University** *Sept. 2021 - Present*
Department of Management Science and Engineering
 - Adaptive Sampling Methods for Endemic Infectious Disease Surveillance**
 - Identified space-time endemic disease surveillance with limited resources to be a *multi-arm quickest change detection problem*. Thompson sampling based methods are widely accepted in literature and industry
 - Showed that Thompson Sampling based algorithms perform poorly in situations where outbreaks occur at locations of low initial prevalence (performance is bounded by random uniform sampling)
 - Proposed a **novel profile likelihood sampling method** which performs competitively against Thompson sampling but more robust to location of outbreaks (*Published in Statistics in Medicine*)
 - Advising NYC Department of Health & Mental Hygiene and NYC Health and Hospital officials in **optimal allocation and deployment** of ~80 mobile testing units for infectious disease
 - Cost-effectiveness of Office-based Buprenorphine Treatment for Opioid Use Disorder (OUD)**
 - Identified gap in literature on expanding medication-assisted treatments (MAT) with limited funding
 - Recognized that office-based buprenorphine treatment is a scalable MAT and has been successful in France
 - Developed a **continuous-time dynamic compartmental model**, a recognized differential equations based cohort simulation model, to simulate the flow of individuals into and out of treatment
 - Recommended proving Buprenorphine in primary care settings as it is cost saving (*Under review in Addiction*)
 - COVID-19 vaccination reactions monitoring using smartwatches**
 - Engaged stakeholders in Israel; accessing patient data collected through existing clinical study
 - Developed custom pipeline to clean time-series smartwatch and survey data for 1000+ participant
 - Implemented a mixed effects model to remove individual-level random effects; identified statistically significant deviation in heart-rate pre and post vaccination for subjects reporting no reaction (*Published in npj Digit.Med.*)
- **University of Auckland** *Mar. 2019 - May. 2021*
Department of Management Science and Engineering
 - Optical Character Recognition (OCR) Pipeline for Maori Archives**
 - Surveyed literature and OCR engines; showed recognition accuracy to be less than 80% with **transfer learning**
 - Exploited the fixed-width document structure for page segmentation using **dynamic programming (DP)** Increased OCR accuracy by **15%** by incorporating DP with state-of-the-art **LSTM based model**
 - Developed an algorithm combining transition probabilities with the *Needleman Wunsch* and *Viterbi* algorithms to reconcile outputs from existing OCR engines

SKILLS

- **Programming and Computing Skills:** Python, Julia, R, Matlab, SQL, VBA
- **Others:** PyTorch, Keras, Tensorflow, AWS, Docker
